Committee Statement

Committee Statement: This is not measurable and impractical and the committee has chosen to delete the requirement.
Response Message: Public Input No. 197-NFPA 1917-2013 [Section No. 6.17.2]

COMMENT THAT REWORDING SUPERIOR TO DELETION
6.25.1*
A retroreflective stripe or combination of stripes shall be affixed to the ambulance in the following proportions:

1. 25 percent of the width of the front each visible cab side surfaces when approached from the front each side

2. 50 75 percent of the overall ambulance length visible patient compartment side surfaces when approached from each side

Committee Statement

These changes are being made as the back of an ambulance is configured differently than a fire truck. The AHJ has the authority to determine the design of all safety markings on the vehicle. Science has established that chevrons are not the only design that provides conspicuity. The intended desire in the existing standard to be consistent between fire & EMS may actually conflict with local culture and preferences. Scientific research and the FEMA study on conspicuity does not dictate one design or color pair, and the color red is highly inconspicuous during daylight and nighttime hours.

Response Message:

Public Input No. 117-NFPA 1917-2013 [Section No. 6.25]
Public Input No. 308-NFPA 1917-2013 [Section No. 6.25.1]
Public Input No. 347-NFPA 1917-2013 [Sections 6.25.1, 6.25.2, 6.25.3]
Public Input No. 467-NFPA 1917-2013 [Sections 6.25.1, 6.25.2, 6.25.3]
6.25.4
A graphic design shall be permitted to replace all or part of the required striping material if the design or combination thereof covers at least the same perimeter length(s) required by 6.25.1 6.28.1.

Committee Statement

Committee Statement: These changes are being made as the back of an ambulance is configured differently than a fire truck. The AHJ has the authority to determine the design of all safety markings on the vehicle. Science has established that chevrons are not the only design that provides conspicuity. The intended desire in the existing standard to be consistent between fire & EMS may actually conflict with local culture and preferences. Scientific research and the FEMA study on conspicuity does not dictate one design or color pair, and the color red is highly inconspicuous during daylight and nighttime hours. It also allows for more flexibility by the AHJ.

Response Message:

Public Input No. 207-NFPA 1917-2013 [Section No. 6.25.6]
Public Input No. 252-NFPA 1917-2013 [Section No. 6.25.6]
Public Input No. 311-NFPA 1917-2013 [Section No. 6.25.6]
Public Input No. 348-NFPA 1917-2013 [Section No. 6.25.6]
Public Input No. 468-NFPA 1917-2013 [Section No. 6.25.6]

Add the attached document as new annex material for this section.
A.6.25.6

Retroreflective material included in the calculation includes any combination of graphics, lettering, a chevron pattern sloping downward and away from the centerline of the vehicle at an angle of 45 degrees, or Battenburg markings.
6.29.1
An electrically powered suction aspirator system shall be furnished.

Committee Statement

Committee Statement: The committee believes this allows for greater flexibility.
Response Message:
Public Input No. 502-NFPA 1917-2013 [Section No. 6.29.1]
7.1.1.2

Printed circuit assemblies provided shall qualify under IPC A-610D, “Acceptability of Electronic Assemblies,” Classification 1.4.1 as Class 2 “For Commercial and Industrial Assemblies” or better. Printed circuit assemblies shall be qualified in accordance with one of the following:

1) Non–life saving systems shall comply with IPC A-610E, Acceptability of Electronic Assemblies, Classification 1.4.1 as Class 2, For Commercial and Industrial Assemblies, or better.

2) Life–saving systems shall comply with IPC A-610E, Acceptability of Electronic Assemblies, Classification 1.4.1 as Class 3, High Performance Electronic Products, or better.

Committee Statement

Committee Statement: This revision is necessary as Class 3 High Performance Electronic Products includes products where continued high performance or performance-on-demand is critical, equipment downtime cannot be tolerated, end-use environment may be uncommonly harsh, and the equipment must function when required such as life support or other critical systems. The proposed language restores the caliber of the circuit assemblies as it has been established by the KKK specifications. A higher rate of failure is not acceptable in an ambulance.
7.1.1.2

Printed circuit assemblies shall comply with/conform to one of the following:

1. Non–life saving systems shall comply with IPC A-610E, *Acceptability of Electronic Assemblies*, Classification 1.4.1 as Class 2, For Commercial and Industrial Assemblies, or better.
2. Life–saving systems shall comply with IPC A-610E, *Acceptability of Electronic Assemblies*, Classification 1.4.1 as Class 3, High Performance Electronic Products, or better.

This revision is necessary because Class 3 high performance electronic products include products in which continued high performance or performance-on-demand is critical, equipment downtime cannot be tolerated, the end-use environment might be uncommonly harsh, and the equipment must function when required to supply life support or other critical systems. The proposed language restores the caliber of the circuit assemblies established by Federal Specification KKK-A-1822. A higher rate of failure is not acceptable in an ambulance.
